SeaLife®

SEALIFE MICRO HD / HD+ FIRMWARE UPDATE

Dear SeaLife Customer / Dealer,

Thank you for purchasing the SeaLife Micro HD/HD+ underwater camera and registering the camera on the SeaLife website.

We are sending this email to inform you about an important firmware update. The new firmware version V1.55 (for Micro HD+) and V2.55 (for Micro HD) fixes the following issue: When the battery is empty, the camera may not have enough power to turn on and can lock-up and/or emit static sound from the speaker.

Attached are the firmware download links and installation instructions: Download Micro HD Firmware version V1.55 (HD+) and V2.55 (HD). This information is also available on the SeaLife website at http://www.sealife-cameras.com/firmware.

We have also experienced an occasional USB connection problem. Here is a link with troubleshooting information to remedy this issue: http://www.sealife-cameras.com/micro-hd-tips-and-technical-updates. Please refer to section 3, titled "Camera won't make USB connection with computer."

If you have any questions, please contact us at service@sealife-cameras.com.

Sincerely,
SeaLife Service Center
